

Commission for
Communications Regulation

Extension of scope of review of certain matters relating to access to eir's rural FTTH network

Information Notice

Reference: ComReg 17/59

Date: 26/06/2017

1. On 25th May 2017 ComReg published an Information notice (ComReg Document 17/43) announcing that it had begun a review into certain matters relating to access to Eircom Limited's ("eir's") rural fibre to the home ("FTTH") network ("the 300K network"). ComReg now wishes to note that the scope of this review has been extended.
2. The review will now also include a review of non-pricing aspects of wholesale products provided using the 300K network and associated facilities, with a view to collating requirements for new products, or for changes to existing products, that access seekers consider may be required.
3. ComReg invites market participants who wish to supply any additional relevant information to that already provided in the context of Document 17/43 by **10 July 2017**. All correspondence should be clearly marked "Review of access to eir's rural FTTH network" and emailed to: wholesaleinforequest@comreg.ie. In parallel, ComReg may gather information directly from relevant market players using its information gathering powers.
