1 About this Document

This document lists the current designation or allocation status of numbers and codes within the Irish telephony numbering and dialling plan in summary form. It updates and replaces the previous version of this document - ODTR 03/143R, issued in December 2003. It takes account of the completion of the 2003 national numbering changes and the designation of the 076 IP-based number range, as well as other minor updates.

2 The Numbering & Dialling Plan

The Irish telephony numbering and dialling plan is made up of all numbers which may be dialled on a publicly available electronic communications network in Ireland and which are used to establish telephone calls. The telephony-numbering plan is managed and administered by the Commission for Communications Regulation (ComReg) as a public resource on behalf of the State, in accordance with Regulation 22(1) of the Framework Regulations¹.

3 Contents of This Document

ComReg is required under Regulation 22(5) of the Framework Regulations¹, to publish details of the national numbering scheme from time to time, and significant subsequent additions or amendments thereto. This document lists the purposes for which the various numbers within the national numbering and dialling plan have been designated. The information relates only to access codes or short numbers for the first five digits dialled. Subscriber numbers and numbers which contain additional characters, such as * and #, are not included. Detailed information about other elements of the numbering scheme is available on the ComReg web site² at <http://www.comreg.ie>, or within the National Numbering Conventions, currently ComReg doc.04/35 (pending consultation and update).

The status of each number type is correct at the date this document is issued. The numbering scheme changes on an ongoing basis and changes that occur after the issue date will be reflected in future versions of this document.

4 Conditions of Allocation

This document is for information purposes only; conditions that apply to designations or allocations are not shown. No entitlement to the use of any access code or subscriber number shall accrue as a result of the issue of this document, whether or not that code or number is included in this document.

¹ European Communities (Electronic Communications Networks and Services) (Framework) Regulations 2003, S.I. No. 307 of 2003

² For example, information on number allocations is available in numbering databases on the web site.

5 Emergency Services

Two short numbers (112 and 999) have been designated to provide access to State Emergency Services. Both numbers provide connection to the same service, however 112 represents a harmonised emergency number in use throughout the European Union.

6 Explanation of Tables

Code can mean an access code which would be followed by a subscriber number (e.g. 021 for Cork), or a complete short number (e.g. 118XX for Directory Enquiries). The codes listed vary in length from 2 to 5 digits.

Status A means the code has been designated for a specific purpose and/or numbers from it have been allocated.

R means the code is reserved for a specific purpose, but is not in use.

C means the code is currently in use but subject to change. The change may be a full recovery of the access code or a change to the subscriber number.

Where numbers are changing, the date for the change is also provided. This is the date at which parallel running for these numbers ends.

Free means the code is not in use and is available for designation and/or numbers from it are available for future allocation.

Subscriber No. Length Where two figures are shown, with an asterisk against the second, this represents an imminent or ongoing change from the first number length to the second.

Irish Telephony Numbering & Dialling Plan Status Report/Apr 2005

Access Code	Status	Allocation/Designation	Subscriber No. Length	Notes / Further Information
0	A	National Access	NA	National trunk dialling prefix
00	A	International Access	NA	International trunk dialling prefix
