I am pleased to present the fourth edition of the Radio Frequency Plan for Ireland. Ten years have passed since publication of the first edition and, in tandem with the rapid and dynamic growth of the Irish economy, the task of managing the radio spectrum has become increasingly complex. The ubiquitous presence of applications and services that utilise the Radio Spectrum has placed unparalleled demands on achieving higher efficiency and economy of use on this finite resource, which in turn places greater emphasis on the importance of its efficient management.

Radio frequency spectrum is a crucial resource which contributes significantly to such key areas as the Telecommunications, Broadcasting, Emergency Services and Transport sectors within Ireland. Furthermore, the use of radio spectrum for consumer products and services which we use in the home, in the office or on the move, as can be the case in today's increasingly mobile environment, has increased dramatically. Consequently, the task of managing this resource has become more challenging than ever.

The provision of clear, complete and accurate information on the radio frequency spectrum is therefore essential for all stakeholders. Moreover, section 35 of the Communications Act, 2002, states that ComReg is obliged to produce, publish and maintain the national Radio Frequency Plan, which details all radio frequency allocations in Ireland. The last complete revision took place in 2004, with numerous lesser revisions taking place in the interim, reflecting all relevant amendments and updates on both a national and international level applicable to Ireland. This latest edition details several significant amendments that were

introduced at the World Radiocommunication Conference held in 2007 (WRC-07), in addition to citing all required updates on national and European legislation, together with the applicable CEPT<sup>1</sup> Decisions and Recommendations.

With this publication of the Radio Frequency Plan, ComReg maintains and develops its commitment to all stakeholders, ensuring that a comprehensive source of information is made available, providing key data on current and potential radio spectrum allocations in Ireland. This document therefore aims to inform a diverse range of stakeholders, including current and potential users of the radio spectrum.

ComReg welcomes views and any proposed amendments or changes in relation to the Radio Frequency Plan, and for this reason a comment form is included at the end of the document for your convenience.

<sup>1</sup> European Conference of Postal and Telecommunications Administrations: <http://www.cept.org/>.

This document contains the Radio Frequency Plan for Ireland as revised on 22 December 2009. In combination with using this document, users are advised to refer to the ComReg website<sup>2</sup> for further updates to the Plan.

The document is divided into ten sections. The tables of frequency allocations are contained within three of these sections. Section 3 contains the frequency plan for the 9 kHz to 27 500 kHz band. Section 4 contains the frequency plan for the 27.5 MHz – 10 000 MHz band. Section 5 contains the frequency plan for the 10 GHz – 1000 GHz band, followed by Annexes to the document.

For each frequency band, the types of radio services that are permitted for operation in Ireland and those radio services that are currently in use in that band are detailed. In addition, the International Telecommunications Union (ITU) Allocations applicable to Ireland and the associated European Common Allocation (from ERC Report 025<sup>3</sup>) for each frequency band are outlined, along with applicable national and European legislation, relevant European Decisions and Recommendations and ComReg documentation.

It should be noted that this Table of Frequency Allocations will be regularly updated to facilitate the introduction of new radio services and to remove allocations for radio services that have been phased out. Amendments will also be made to align the document to any new international agreements reached on spectrum utilisation e.g. at World Radiocommunication Conferences (WRCs) of the ITU or within CEPT or the European Union.

## Explanations

- Column 1:** Values in this column denote the radio frequency band. Units used in the column header are: kHz indicates kilohertz, MHz indicates Megahertz and GHz indicates Gigahertz.
- Column 2:** This column shows the type of service allocated to the band by the ITU, e.g. (FIXED, MOBILE). These allocations are defined in the ITU Radio Regulations. Entries in UPPER CASE denote primary services while entries in lower case denote secondary services as defined in the Radio Regulations. Footnotes (e.g. 5.149) are the footnotes to the Table of Frequency Allocations as detailed in the Radio Regulations. Only footnotes relevant to Ireland are included in this table, the full text of which appears in Chapter 3 Annex 1.
- Column 3:** This column indicates the European Common Allocation for the band according to ERC Report 025. ERC Report 025 represents the strategic objective of CEPT to achieve a harmonised table of frequency allocations and utilisations in Europe. Entries in UPPER CASE denote primary services while entries in lower case denote secondary services as defined in the Radio Regulations.
- Column 4:** This column indicates the current national usage of the frequency band in Ireland.
- Column 5:** This column details the national and European Legislation applicable to the frequency band.
- Column 6:** This column details the relevant CEPT Decisions and Recommendations applicable to the frequency band.
- Column 7:** This column gives relevant document references as well as other additional information applicable to the frequency band.

|                      |  |                                   | EU2                               |                                   |   |               |                            |
| Column 1             | Column 2   | Column 3                          | Column 4                          | Column 5                          | Column 6  | Column 7      |                            |

The first column indicates the frequency band as the spectrum from 402 -403 MHz.

The second column indicates that the ITU have allocated this band to five services, namely to Metrological aids, Earth-Exploration Satellite service and, meteorological satellite, the Fixed service and the Mobile service but excluding the aeronautical mobile service. The allocations to Metrological aids, Earth-Exploration Satellite service and the meteorological satellite services are on a primary basis, as indicated by the use of UPPER CASE letters. The allocations to the Fixed service and the Mobile except aeronautical mobile service are on a secondary basis. Secondary services shall not cause interference to primary services, nor shall they claim protection from harmful interference from primary services but they can claim protection from other stations of the same of other secondary services to which frequencies are assigned at a later date.

# Example of using the Tables

Where a footnote appears on the same line as a service this indicates that the footnote is directly applicable to the service that it shares a line with. Generic footnotes (e.g. EU2) appear in a separate rows to the listed radio services as they are not directly applicable to them.

ITU Footnotes e.g. 5.92 (not relevant to this example) mentioned in the tables below may be found in Chapter 3 Annex 1 of this document while European Footnotes may be found in Chapter 3 Annex 2:

The third column indicates the European Common Allocation for the frequency band as outlined in ERC Report 025<sup>2</sup>.

The fourth column indicates the national usage for the frequency band. In Ireland the band 402 - 403 MHz is used by meteorological aids and Short Range Devices.

The fifth column details the relevant national and European legislation. In Ireland Primary legislation is in the form of Acts and secondary legislation is in the form of Statutory Instruments (S.I.).

The sixth column details any relevant CEPT Decisions or Recommendations applicable to the frequency band. These references are available to download from [www.ero.dk](http://www.ero.dk).

The seventh column contains relevant notes and references such as:

- Relevant ComReg documents which can be downloaded from [www.comreg.ie](http://www.comreg.ie).
- Applicable sections of the ITU Radio Regulations e.g. Appendix 16 of Radio Regulations (not relevant to this example).
- Applicable regional frequency plans e.g. ITU Stockholm 1961 plan (not relevant to this example).

# 10 GHz to 1000 GHz

## GENERAL INFORMATION

All radio and telecommunications terminal equipment must comply with the R&TTE Directive. Please see [http://www.comreg.ie/radio\\_spectrum/randtte.543.420.html](http://www.comreg.ie/radio_spectrum/randtte.543.420.html) for further details.

All apparatus for Wireless Telegraphy requires a licence unless it has been specifically exempted from licensing under Irish Legislation by means of an Exemption Order. Please see [http://www.comreg.ie/radio\\_spectrum/exemptions.541.488.rslicensing.html](http://www.comreg.ie/radio_spectrum/exemptions.541.488.rslicensing.html) for further details.

**5.540** *Additional allocation:* the band 27.501-29.999 GHz is also allocated to the fixed-satellite service (space-to-Earth) on a secondary basis for beacon transmissions intended for up-link power control.

**5.541** In the band 28.5-30 GHz, the earth exploration-satellite service is limited to the transfer of data between stations and not to the primary collection of information by means of active or passive sensors.

**5.541A** Feeder links of non-geostationary networks in the mobile-satellite service and geostationary networks in the fixed-satellite service operating in the band 29.1-29.5 GHz (Earth-to-space) shall employ uplink adaptive power control or other methods of fade compensation, such that the earth station transmissions shall be conducted at the power level required to meet the desired link performance while reducing the level of mutual interference between both networks. These methods shall apply to networks for which Appendix **4** coordination information is considered as having been received by the Bureau after 17 May 1996 and until they are changed by a future competent world radiocommunication conference. Administrations submitting Appendix **4** information for coordination before this date are encouraged to utilize these techniques to the extent practicable. (WRC-2000)

**5.543** The band 29.95-30 GHz may be used for space-to-space links in the Earth exploration-satellite service for telemetry, tracking, and control purposes, on a secondary basis.
